5 CHECKS · MULTI-ACCOUNT AI

Five checks before an assistant touches a second account

Twice I connected the wrong workspace. Both times the screen said everything worked.

WHAT THE SCREEN SAID

Connected

WHAT IT WAS READING

Wrong workspace

1

Sign in privately.

Authorise in a private window, with only the target account signed in.

2

Name it after the place.

Label each connection by the community or project it belongs to, never by the provider.

HARD TO TELL APART

~~Mail 2~~

~~Drive (new)~~

~~Chat workspace 3~~

OBVIOUS AT A GLANCE

Community events

Side project

Day job

3

THE ONE THAT SAVED ME MOST

Never trust the default.

Defaults are where the wrong account hides. Say which account on every request.

"Summarise this week's threads."
READS WHICHEVER ACCOUNT IS THE DEFAULT

"Summarise this week's threads in **Community events**."
READS THE ACCOUNT YOU NAMED

4

Test it.

Ask one question only that account can answer before you trust anything else it says.

Who confirmed the final headcount for the meetup?

Ana, in the venue thread on Tuesday.

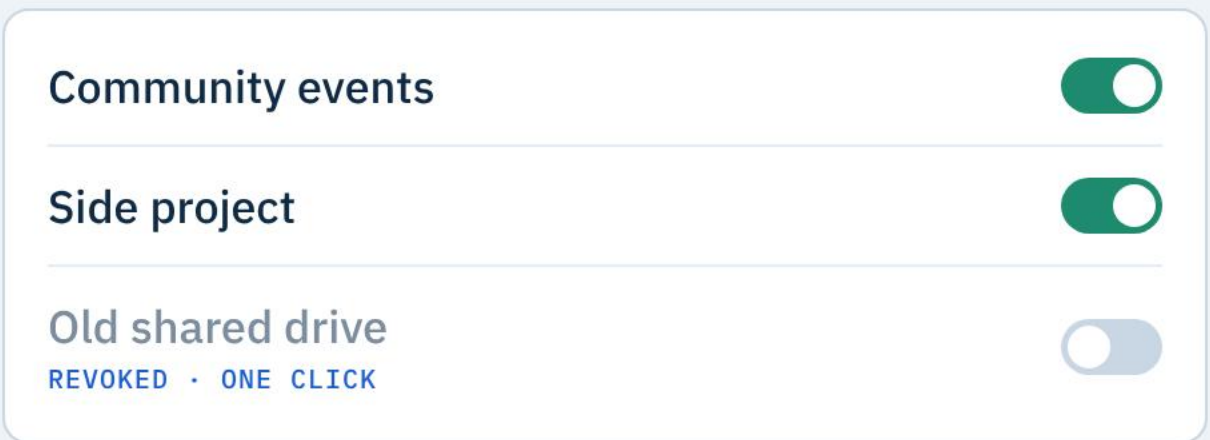

✓ SOURCE: COMMUNITY EVENTS

If the answer cites any other account, stop and fix the connection.

5

Know the off switch.

Find out how to revoke each connection in one step, before you need to.

Connect once. Keep the boundaries. Ask across everything.

1. Sign in privately
2. Name it after the place
3. Never trust the default
4. Test it
5. Know the off switch
